

A surveillance camera system can benefit your school or child care facility in many ways

- **Safety:** Not only do cameras help you maintain safety around your campus, they also discourage misbehavior. Conspicuously placed cameras have been shown to reduce threats of violence and vandalism drastically.
- **Visitor Monitoring:** Security cameras at entrance doors can help your administrative staff monitor visitors and make sure they are properly signed in.
- **Monitor Parking Lots:** Security cameras can prevent and deter criminal activity and theft in parking lots.
- **Help Investigations:** Archived surveillance footage can be used to identify individuals who have committed sexual harassment, other crimes, bullying, etc.

- **Remote Access:** A video surveillance system operating with IP network technology enables video streams to be sent over the internet for remote monitoring. Footage from cameras throughout the campus can be viewed online from any computer with an internet connection and access to the network.
- **Improve Image:** The enhanced security provided by video surveillance can give a good impression to potential customers and give your current customers peace of mind.

School and education surveillance systems would be ideal for…

- Child Care
- Campuses
- Lab Research
