

A POS (point of sale) system is a computerized process for making sales, and is generally used in places such as restaurants, retail stores, salons, and other business. POS systems can benefit a business in many ways. These systems can record sales information, track inventory, manage appointments, increase speed of service and store customer data. A POS system can also be integrated into your surveillance system to increase security and prevent theft. In addition to offering POS hardware and software, services and supplies we can also provide wireless bar management and credit card processing.

Wave Technologies can provide the most feature rich, user friendly and efficient POS system for any industry. Contact us to discuss how we can customize an affordable POS system for your business.
